Ready to use

A close-up, low-angle shot of a large industrial machine, likely a hydraulic bending press, in operation. The machine is dark and metallic, with a large cylindrical component in the foreground. Bright blue and white sparks are flying from the top right corner, creating a dramatic, high-contrast scene against a dark background. The sparks are concentrated in the upper right quadrant, with some trailing downwards. The machine's surface shows some wear and texture. The overall atmosphere is industrial and powerful.

## ABOUT US

S.I.M.A.S.V. was the inventor in **1957** of horizontal hydraulic bending presses, which distinguishing features are **flexibility** and **versatility**. Due to their ease of use and maintenance and thanks to the countless tools with which they can be equipped, SIMASV bending press are suitable for use in any type of mechanical processing company.

## MECHANICAL DESIGN

Each Simasv machine is a unique and **customized** product, specifically designed to fulfill every single Customer's needs and resulted from the multiple possible combinations of models, sizes and equipment. Our commitment is constantly oriented at Customer satisfaction, because we believe in a long-lasting relationship with our dealers and our direct user Clients.

## PRODUCTION

Made in Italy products are a guarantee: high quality and security standards mark Simasv machinery as a product of excellence, thanks to the long time expertise gained through decades in manufacturing machines capable of becoming really favorable solutions for the market requirements.

We also offer a consulting service through our internal technical department, which is always available to study and find out the best possible solution: our goal is actually our Customer's complete satisfaction.

# INDUSTRY SOLUTIONS

## CUSTOMER APPLICATIONS

Various industries and sectors that require ah high production quality components put their trust in SIMASV horizontal press brake machines. See an overview of application examples here.

### Agriculture

### Automotive

# SUPER SERIES

## HORIZONTAL PRESS BRAKE

Since its groundbreaking **invention in 1957**, the SIMASV SUPER series has set the standard for hydraulic horizontal press brakes, delivering unmatched flexibility, ease of use, and long-lasting performance. Designed for reliability and robust performance, the **SUPER series** is available in a range of power capacities: **22, 40, 70, 100, 120, and 150 Tons**, making it the perfect solution for a variety of industrial needs.

The innovative design, featuring a cylinder positioned below the work surface and hydraulically adjustable carriage movement, creates an expansive, obstacle-free work area. This unique configuration ensures **360° bending capabilities**, while providing operators with a safer, more ergonomic working position at the front of the machine.

A standout feature of the SIMASV SUPER series is the precision **micrometric and hydraulic adjustment** of the carriage, controlled effortlessly via a hydraulic flow control valve and handwheels at the front of the machine. This allows for highly **accurate bending adjustments**, enabling operators to start production immediately – no trial runs, no material waste, just optimal efficiency from the get-go.

With **user-friendly** operation, the SUPER series presses empower your team to take full advantage of their capabilities without delay, boosting productivity and ensuring top-tier results with every job.

T-22 SUPER

## Key features

- ✓ **Cylinder positioned beneath the work table:** this innovative design provides a spacious, unobstructed work area, allowing the operator to work in a front-facing position for maximum safety and ergonomics. The expansive work table also offers 360° bending capacity, ensuring versatility for a variety of tasks.
- ✓ **Micrometric and hydraulic advance speed adjustment** via a hydraulic flow control valve with handwheels on the front of the machine.
- ✓ **Continuous adjustment**, even at maximum operating capacity, enables precise bending angles to be achieved immediately, eliminating the need for trial runs and material waste.
- ✓ **Forced lubrication system** via a manual pump (optional: automatic pump), ensuring smooth operation and reduced wear.
- ✓ **Tool holder pins** made from alloy steel and heat-treated for superior strength and reliability.
- ✓ **Integrated tool storage** shelves for convenient access to equipment and accessories.

## SIMASV INTERFACE – CNC BENDING

ENERGY  
SAVER

TOUCH  
SCREEN

USER  
FRIENDLY

RAM  
HIGH  
CAPACITY

**SIMASV CNC** horizontal press brake guarantees maximum precision and provides simple, intuitive assistance during all bending operations.

The new SIMASV Interface CNC software comes with a **modern touchscreen** display designed for maximum ease of use during every stage of bending. Set up your production program: the CNC control guides you step-by-step, helping you quickly achieve your desired results with the highest precision.

Programs can be created using traditional alphanumeric input or by directly drawing 2D parts through a simple, integrated **graphic editor**. SIMASV Interface CNC software aids the operator by visually displaying the **optimal bending sequence**, ensuring even less experienced users can achieve top-quality results. It also allows you to import DXF files, including angles and radii information, and supports simulation, including the automatic or manual search for the best bending sequence.

A **tool editor** is also available through templates or DXF import.

### General features

- ✓ **Fast and direct input** of angles and lengths.
- ✓ **2D graphical creation** of the bending program.
- ✓ **Workpiece development calculation**.
- ✓ **Simulator** with automatic or manual search for the best bending sequence.
- ✓ Ability to **exchange data** via USB stick or network connection with the office.
- ✓ Production time management.
- ✓ **DXF import** of parts and tools.
- ✓ **Tool editor** through templates.
- ✓ **Remote assistance tool**.

### Automatic angle adjustment

The SIMASV CNC horizontal press brake can be equipped with **active angle measurement**.

After each bending process, the bend is measured with the angle measurement and is re-bent with one or more further bends.

This technology allows compensation for material fluctuations and different spring-backs in the material, allow precise and repetitive angles from the first bend, without the need to apply corrections.

### Brushless backgauge

SIMASV CNC presses can be equipped with the **new brushless backgauge system**.

Via the new CNC touchscreen, you have full control of the optional 1, 2 or 3 meter backgauge for fast and accurate part positioning.

The automatic CNC-controlled backgauge enables the production of single and mass parts with significantly higher accuracy, speed and repeatability than conventional manual methods.

# TOOLS

## STANDARD TOOLING

One machine, endless possibilities: SIMASV presses can be equipped with a wide variety of different tooling. Standard and customized tools are available according to the needs of the individual customer. Thanks to the wide selection, SIMASV presses are extremely versatile and suitable for a variety of uses. On these pages you will find some of the standard equipment SIMASV offers its customers.

Flat bar bender

# CUSTOM MACHINES

## READY TO USE

One of our strength points is the realization of special machines meant to bend and curve any metal material.

They are designed and manufactured **on specific custom needs**, combining the best technical solution with the budget possibility of our Customers, aiming at granting top high production rates and optimizing the costs. These machines are manufactured and assembled with top quality mechanical and electronic parts in order to grant them a higher level of reliability.

In order to manufacture our custom machines, our design project service is always at your complete availability for the analysis and feasibility of your projects for cost estimate, lay-out and final realization of the required suitable machine.

The design of our special machines originates from the analysis of the workpiece according to the customer's individual needs: this way, we create tailored solutions by offering maximum **flexibility** in terms of construction and performance, with ad hoc features in order to achieve the goal.
